

Study Guide for Unit 2 Lessons 3-5

Length

(from smallest unit to largest unit)

(abbreviations are in paranthesis)

Customary System	Metric System
1. Inch (in.) similar to →	Centimeter (cm.)
2. Foot (ft.) similar to →	Decimeter (dm.)
3. Yard (yd.) similar to →	Meter (m.)
4. Mile (mi.) similar to →	Kilometer (km.)

When you think....	You should think of:
Inch →	1 joint on your index finger OR a small paperclip
Foot →	Loaf of bread
Yard →	Baseball bat
Mile →	It would take you 15-20 minutes to walk this far.
Centimeter →	Width of your index finger

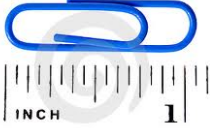

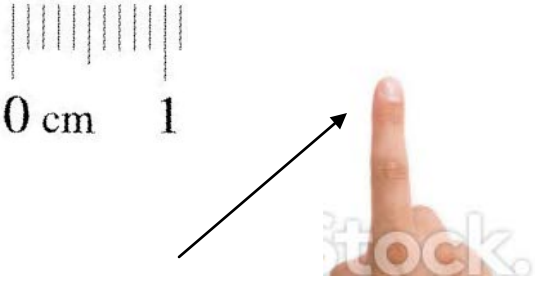

Units you should know:

Customary	Metric
1 foot = 12 inches	1 decimeter = 10 centimeters
1 yard = 36 inches	1 meter = 100 centimeters
1 yard = 3 feet	1 Kilometer = 1,000 meters
1 mile = 1,760 yards	
1 mile = 5,280 feet	

Reading a Ruler:

Length

When you see...	Think...
Inch	
Foot	
Yard	
Centimeter	

Capacity = measures liquids

(from smallest unit to largest unit)

(abbreviations are in paranthesis)

Customary System	Metric System
	milliliter (mL.)
1. cup (c.)	
2. pint (pt.)	
3. quart (qt.) ... is similar to →	Liter (L.)
4. gallon (gal.)	

Customary System

When you think....	You should think of:
cup →	Milk carton at school or measuring cup to cook with
Pint →	2 school milk cartons put together or small ice-cream carton
Quart →	Fat Gatorade bottle or tall carton of milk
Gallon →	Big milk jug

Metric System

When you think....	You should think of:
Milliliter →	Small medicine dropper
Liter →	Fat Gatorade bottle or half of a 2-Liter Soda bottle

Units you should know:

Customary System	Metric System
1 gallon = 16 cups	1 Liter = 1,000 milliliters
1 gallon = 8 pints	
1 gallon = 4 quarts	
1 quart = 2 pints	
1 quart = 4 cups	
1 pint = 2 cups	
2 pints = 4 cups	

Capacity = Liquid Measurement

When you see...	Think...
Cup	 A measuring cup with a 1 cup mark and a carton of milk with a 'MISSING' sign.
Pint	 A pint container of Ben & Jerry's Americone Dream ice cream.
Quart	 A quart bottle of Gatorade.
Gallon	 A gallon jug of milk.
Milliliter	 A medicine dropper and a syringe.
Liter	 A liter bottle of Gatorade.

Weight = changes on the moon! (depends on gravity)

(from smallest unit to largest unit)
(abbreviations are in parenthesis)

Customary System
1. ounce (oz.)
2. pound (lb.)
3. ton (T.)

When you think....	You should think of:
Ounce →	Pencil 
Pound →	Soccer ball 
Ton →	Car 

Units you should know:

Customary
1 pound (lb). = 16 ounces (oz.)
1 Ton = 2,000 pounds (lbs.)

Mass = never changes (not even on the moon!)

(from smallest unit to largest unit)
(abbreviations are in paranthesis)

Metric System
1. gram (g.)
2. kilogram (kg.)

When you think....	You should think of:
Gram →	<p>\$1.00 bill or a paperclip</p> 
Kilogram →	<p>Math textbook</p> 

Units you should know:

Metric
1 Kilogram = 1,000 grams

Temperature

Customary System	Metric System
<i>Fahrenheit</i>	<i>Celsius</i>
Freezing Point = 32°F	Freezing Point = 0°C
Boiling Point = 212°F	Boiling Point = 100°C
Room temperature = 65°F - 70°F	Room temperature = 20°C
Hot summer day = 80°F or higher	Hot summer day = 35°C

CONVERSION TIPS

A good rule of thumb when converting units is to first look at what type of unit you are converting.

- If you are converting a **LARGER** unit into a **smaller** one then you will need to **multiply**

Ex: larger unit (lb) to smaller unit (oz)

$$9 \text{ lb} = \underline{\quad} \text{ oz}$$

Thought Process:

$$1 \text{ lb} = 16 \text{ oz} \text{ therefore}$$

$$16 \times 9 = 144$$

Solution:

$$9 \text{ lb} = 144 \text{ oz}$$

- If you are converting a **smaller** unit into a **LARGER** one then you will need to **divide**

Ex: smaller unit (ft) to larger unit (yd)

$$15 \text{ ft} = \underline{\quad} \text{ yd}$$

Thought Process:

$$3 \text{ ft} = 1 \text{ yd} \text{ therefore}$$

$$15 \div 3 = 5$$

Solution:

$$15 \text{ ft} = 3 \text{ yd}$$

Convert units by multiplying or dividing.

When changing smaller units to larger units, divide.

When changing larger units to smaller units, multiply.

The basic unit for measuring length in the metric system is the meter (m).

If Base Unit is METER :	
Kilometer	= 1,000 meters
Hectometer	= 100 meters
Dekameter	= 10 meters
Meter	= 1 meter
Decimeter	= one tenth meter
Centimeter	= one hundredth meter
Millimeter	= one thousandth meter

An easy way to remember the metric system units try this acronym:
KING HENRY DOESN'T USUALLY DRINK CHOCOLATE MILK

Metric Conversions are changing a basic unit into a different size. An example of metric conversion is changing a millimeter into a centimeter.

To convert a smaller unit to a larger unit, use division.

$$3.5 \text{ m} = .0035 \text{ km}$$

To convert meters to kilometers, divide the number of meters by 1000.

$$3.5 \div 1000 = .0035$$

To convert a larger unit to a smaller unit, use multiplication.

$$5 \text{ m} = 500 \text{ cm}$$

To convert meters to centimeters, multiply the number of meters by 100, because centi means one hundredth.

$$5 \times 100 = 500$$

PRACTICE:

Try these conversions.

K H D U D C M

$104 \text{ km} = \underline{\hspace{2cm}} \text{ m}$

$480 \text{ cm} = \underline{\hspace{2cm}} \text{ m}$

$5.6 \text{ kg} = \underline{\hspace{2cm}} \text{ g}$

$8 \text{ mm} = \underline{\hspace{2cm}} \text{ cm}$

1. 4 feet = inches
2. 36 inches = feet
3. 642 feet = yards
4. 72 inches = yards
5. 21 yards = feet

Units of Time

60 seconds (s) = 1 minute (min)

60 min = 1 hour (hr)

24 hr = 1 day (d)

7 d = 1 week (wk)

52 wk = 1 year (yr)

12 months (mo) = 1 yr

365 d = 1 yr

366 d = 1 leap year

Examine this example that changes smaller units (hours) to larger units (days).

75 hours = ____ days

Since 24 hours = 1 day, divide 75 by 24.

$75 \div 24 = 3r3$

75 hours = 3 days, 3 hours

Here is an example that changes larger units (hours) to smaller units (minutes).

$$19 \text{ hrs} = \underline{\hspace{1cm}} \text{ min}$$

Since $60 \text{ min} = 1 \text{ hr}$, multiply 19×60

$$19 \times 60 = 1140$$

$$19 \text{ hrs} = 1140 \text{ min}$$

PRACTICE:

1. 5 minutes = _____ seconds

2. 660 minutes = _____ hours

3. The first bell at Tyler's school rings at 7:50am. Students are dismissed by the final bell at 2:40pm. How many hours is Tyler in school each day?
